DETAILED ACTION

Allowable Subject Matter

Claims 1-23 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-7, the prior art fails to teach a photon counting radiographic system having a radiographic energy detector detecting radiographic energy with a given flux rate passing through an object to be imaged, a PC channel sampling the electrical signals in a sampling window and provide a photon count output, and a control automatically adjusting the sampling window at least as a function of the given flux rate as claimed in independent claim 1.

Regarding claims 8-17, the prior art fails to teach a CT system having a detector element configured to output signals indicative of detected radiographic energy attenuated by an object, PC channel configured to count a number of photons of the detected radiographic energy according to a variable shaping time, and a shaping time controller configured to control the variable shaping time in near real-time based on the photon output count data as claimed in independent claim 8.

Regarding claims 18-23, the prior art fails to teach a method of preventing radiation energy detector saturation by monitoring flux of radiation energy that has been passed through an object to be imaged with a detector designed to sample a photon charge cloud within a given sampling window and count the number of photons, comparing a current flux on the radiation energy detector to a base flux level corresponding to the given sampling window and adjusting the given sampling window

to correspond to the current flux based on the comparison as claimed in independent claim 18.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
